

Direct current ensures
efficiency in buildings.

**BACH
MANN**

BSG

Use your energy to maximum effect. We will show you how.

The BACHMAN Systems team provides you with comprehensive advice and support when it comes to making optimum use of the renewable energy you have generated. The shift towards direct current technology is opening up new options for running your building as cost-effectively as possible, without a big administrative overhead, directly for your own consumption.

We will: provide you with highly informative analyses and design concept proposals at the start of your project, which you can use to decide whether investing in a direct current system is worth your while.

With BACHMANN Systems you can achieve your aim **in just three steps:**

Analysis of current situation (building, position, roof inclination)

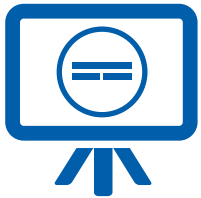

Costs/benefit analysis

ROI calculation

IMPLEMENTATION

Direct current technology for your building.

Welcome to the 21st century.
Benefit from our comprehensive expertise.

Information

We provide you with comprehensive advice about the hot topic of direct current technology. We will arrange a strategy meeting with your team or during a BACHMANN Systems training course.

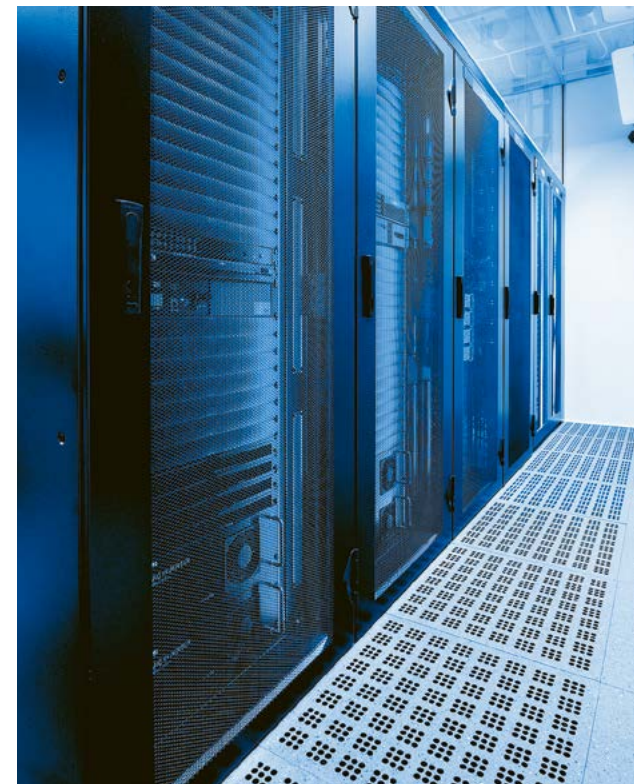

Design

We analyse the options that are open to your company and present you with a tailored design proposal. At the same time, we are happy to support you when selecting suitable products and suppliers.

Implementation

We support every aspect of your construction or conversion project so you can successfully participate in a new era of economic energy production.

Shape your future with BSG.

BACHMANN Group

Since being founded in 1947, BACHMANN has become a company with a global reach in the electronics technology sector. BACHMANN operates production sites and development and quality management centres in Germany, Romania and China, as well as numerous international sales companies and partnerships.

We employ more than 600 people around the world. Our success as a manufacturer of electronic components and systems has always been down to our ability to spot trends and use these to develop products with the greatest benefit for our customers. Outstanding examples are the BACHMANN BlueNet product range, an innovative and efficient solution for energy management, and our multi-functional desk connection panels, which have already been awarded numerous international design prizes.

BACHMANN Systems

An innovation hub, trend scout and service provider – these are the things that BACHMANN Systems, founded within the BACHMANN Group in 2015, stands for. Employees at BACHMANN Systems think far into the future and develop tailor-made technical innovations. The results are practice-oriented products and systems for the lifestyle and processes of tomorrow.

BACHMANN Systems distinguishes itself from the competition by its use-oriented and systemic approach. This provides the basis for innovative global solutions for homes, offices, factories and data centres. Direct current technology is one of BACHMANN Systems' core competencies, which has been expressed professionally in the new 380-volt direct current data centre.
